

HBX Standard Plans Working Group

September 19, 2023

DRAFT - AV ANALYSIS #1

We have estimated the impact of including the antihypertensive drugs and cardiac rehab visits at \$0 cost share on the 2024 standard plans. The results are summarized below:

Plan	Current	Adjusted	Impact
Platinum Plan 2024	91.72%	91.76%	0.04%
Gold Plan 2024	81.87%	81.88%	0.01%
Silver Plan 2024	70.46%	70.73%	0.27%
Bronze Copay Plan 2024	64.95%	65.34%	0.39%

The main impact in the AV Calculator inputs is on the generic drug copay due to the antihypertensive drugs. Including all those NDCs, based on the list you provided from the Massachusetts Connector, causes a slight increase in the metal AV for the Platinum and Gold plans, but a larger increase on the Silver and Bronze Copay plans, which pushes the Bronze Copay plan outside the de minimis range. The same general approach and logic was utilized to estimate this impact as has been done for the other items which have been reviewed (i.e., diabetes and pediatric mental health). If you have any questions or if any changes are needed, please let us know.
