Additional Information

Illustrative example of ARP at work

Pre-ARP, a 51-year old resident making approximately \$50,000/year (approximately 400%FPL) did not qualify for lower premiums. Now that customer gets \$280 APTC – meaning a \$280 lower monthly premium. So instead of paying more \$530/month for health insurance, now the resident pays \$250/month – less than half. So instead of paying \$6,360 annually, the resident pays \$3,000 for health insurance annually, saving \$3,360 a year.
